Skills

- **Languages:** C/C++, Go, Java, Python, JavaScript.
- **Libraries & Frameworks:** cmux (go), gorilla/mux (go), Django (python), Express.JS, React.JS.
- **Database:** MySQL, MongoDB.

Education

- | | |
|---|-------------|
| Shahjalal University of Science and Technology, Sylhet B.Sc. in Software Engineering | 2020 – 2024 |
| ◦ CGPA: 3.72 | |
| Notre Dame College, Dhaka Higher Secondary School Certificate | 2017 – 2019 |
| ◦ GPA: 5.00 | |
| Motijheel Govt. Boys' High School, Dhaka Secondary School Certificate | 2015 – 2017 |
| ◦ GPA: 5.00 | |

Work Experience

- | | |
|---|--|
| Brainstation-23 | Mohakhali, Dhaka
October 2024 – Present |
| RideAlike Project
Contributed to a Canada-based ride-sharing platform in production that connects vehicle owners and renters through a secure and seamless experience. | |
| <ul style="list-style-type: none">◦ Developed backend components for the RideAlike platform using microservices architecture with Go, gRPC, and MongoDB◦ Actively collaborated in sprint planning sessions and client meetings to ensure development aligned with business requirements and project roadmaps◦ Successfully integrated critical third-party APIs including ZOHO, Certn, and AI chatbot solutions to enhance platform capabilities◦ Worked on core features including payment processing system, latency optimization, resolving security and memory-related issues, and implementing core features◦ Participated in cross-functional team efforts to support the platform's rapid user base expansion and evolving feature set | |

Problem Solving

Solved over 1000 programming problems on various online problem solving platforms.

- **Codeforces:** [PhoenixBlaze](#) [🔗](#) [CoderX7](#) [🔗](#) (max rating: 1386)
- **CodeChef:** [fahad005](#) [🔗](#) (max rating: 1709)
- **StopStalk:** [fahad005](#) [🔗](#)
- **Leetcode:** [fahadpathan56](#) [🔗](#)

Hackathon Experience

- **AI Olympiad, DIU, 2025:** 1st Runner-up (Tertiary category)
- **Smart Unibator - University Innovation Hub Program, SUST, 2024:** 2nd Runner-up
- **Code Samurai, DU, 2024:** Reached the 2nd phase
- **Innovation Fair, SUST, 2024:** Received Special Recommendation

Certifications

- [AWS Certified Cloud Practitioner](#) 

Projects

EcoSync

[GitHub](#) 

A comprehensive web app for DNCC's waste management. Features include role-based access, vehicle & facility management, billing, route & fleet optimization, and dashboard statistics.

- **API Development:** Designed activity, use-case diagrams & wrote APIs.
- **Authentication:** Implemented authentication with JWT, session management, and password encryption.
- **Real-time Communication:** Enabled real-time data updates using Socket.io.
- **Technologies Used:** Backend - Express.JS, Socket.io; Database - MongoDB.

SUST Football Tournament Management System

[GitHub](#) 

A web application for managing the SUST Football Tournament efficiently, including teams, schedules, fixtures, and scores.

- **API Development:** Designed and implemented APIs for tournament management functionalities.
- **Authentication:** Secured authentication using JWT and session management.
- **Database Management:** Handled database operations and created activity diagrams.
- **Technologies Used:** Backend - Golang; Database - MySQL.

HandyHire

[GitHub](#) 

A web application that connects individuals needing help with handy jobs, such as electrical work and cleaning, with people looking for part-time tasks.

- **API Development:** Developed APIs for job listings and user management.
- **UI Design:** Designed user interface pages for a smooth experience.
- **Database Management:** Managed the database and created activity diagrams.
- **Technologies Used:** Backend - Golang; Database - MySQL; Frontend - HTML & CSS.

Connect

[GitHub](#) 

An Android app for disaster management, featuring volunteer coordination, real-time warnings, weather updates, essential contacts, distress location tracking, and seamless communication.

- **UI Design:** Designed an intuitive user interface for easy navigation.
- **Weather API:** Integrated weather updates using an Open API.
- **Real-time Tracking:** Implemented real-time location tracking for disaster zones.
- **Chat Functionality:** Added real-time chat functionality using Firebase.
- **Technologies Used:** Java; Database: Firebase.

Survive-IT

[GitHub](#) 

An engaging game set in a captivating world where the hero must protect Wonderland by battling sea and sky monsters.

- **Animations Development:** Developed animations for movements, spells, and explosions.
- **Collision Detection:** Implemented collision detection between the hero and monsters.
- **Dynamic Backgrounds:** Designed and implemented dynamic background rendering for an immersive experience.
- **Technologies Used:** Java (LibGDX).
